

# CURTAIN / DRAPERIES RELEASE

Curtains & Draperies, while hanging, occasionally develop “soft” areas due to continued exposure to sunlight, heat, humidity, and air pollution. As a result, in spite of the utmost care given to these items during our cleaning procedure, holes or tears may appear. Some faded areas may not be apparent due to soil coverage. Additional shrinkage may sometimes occur, due to the nature of the fabric, or because they were not preshrunk by the manufacturer. For these reasons we will clean your draperies and/or curtains providing you agree to the following exceptions:

*I have read the above statement and do not hold you responsible should any of these conditions occur or become evident during the cleaning procedure:*

1. Sun fading.
2. Loss of color due to non-fast dyes.
3. Tears or holes due to fabric degradation while hanging.
4. Shrinkage due to improper pre-shrinkage at the manufacturer
5. Water stains which may darken due to the heat of the cleaning process.
